

# MCP

{

## Tools:

### Get Minecraft Mod input

Get specific actions like damage, placing/breaking blocks, biome data, daynight from the minecraft mod return it as a JSON.

### Get Screenshot

Takes from a specified local directory the last two images and returns them

### Describe

Takes in optional Screenshot and optional mod input - But at least one has to be non null

If 2 images are given then describe the changes

If a mod is included, describe the events

Describes what has recently changed, and has been done between contexts.

Only keep 5 images at a time

For mods, take the difference between each iteration. That is, keep for context what happened last (last JSON) vs current JSON for a mod.

### Narrate

Generate text that's funny, insulting, acting as a narration to the imputed description

### TTS

Turns narration to audio file with a funny voice and returns an mp3
